IN-WALL & IN-CEILING SPEAKERS

More than any other component, speakers define the sound of an audio system. In-wall and in-ceiling speakers have made tremendous strides in recent years to the point of competing with their cabinet-style counterparts. Thus, many are turning to in-wall/ceiling solutions to maximize their living space. Extremely popular with interior designers and decorators, they offer a clean, minimalist look and near-invisible presence, thanks to their camouflage grilles. When installing your next system, you may want to consider the excellent products listed below for a heard-but-not-seen experience in a home that truly emanates music.

JBL

LED Backlit LCD HDTV

Stepping up, the BRAVIA EX523, EX620 and EX720 feature brilliant Full HD (1080p) picture quality with Edge LED backlight. Unlike conventional LCD televisions, they use edge-mounted LEDs to light up the screen and deliver outstanding contrast and dark-scene detail. Other benefits include sharp images, rich color detail and a thin design. They also incorporate Sony's X-Reality Engine for a vivid, lifelike picture experience. This single chip solution features Sony's Intelligent Image Enhancer which divides the signal into four characteristics including texture, outline, contrast and color, and then optimizes each one individually for more vibrant and detailed images.

- With Wi-Fi capability (USB wireless LAN adapter required), you can go beyond scheduled programming and watch what you want, when you want. Enjoy the widest selection of internet entertainment including Hollywood blockbusters from Qriocity, watch hit movies with Netflix, popular TV shows on Hulu Plus, user-generated video on YouTube or listen to the latest music with Pandora.
- Easily connect to family and friends live on your HDTV wherever they are with Skype. Enjoy free high definition Skype-to–Skype video calls from the comfort of your living room. Simply attach a webcam with mic and see your friends on the big screen – it's unlike any experience you could get on a PC.

DIGITAL LIVING

There's no doubt we live in the digital era. Music, photography, video — it is all digital, and it is at our fingertips. Digital technology has transformed the way we work, play and communicate. From the pictures we take with our digital cameras, to the music we listen to on our digital music players, and all the information stored on our computers, PDAs, and mobile phones, everything is based on some type of digital file format.

Whether we are traveling by train, plane, automobile, or boat; while studying, jogging, working out—and even swimming—we obviously want our videos, music, movies, TV programs, and podcasts with us. The industry overall has made great progress toward developing innovative products and services that are helping make digital living a reality for consumers.

UX Series

Astonishingly thin, these ultra portables are made possible through the use of a strong but light aluminum alloy shell with a unique 'spun' finish on polished surfaces. The artistry of the series draws inspiration from luxury timepieces, displaying sharp edges, an oversized keyboard and smartphone-like touchpad for added comfort, as well as reinforced hinges for extended longevity. Measuring a mere 17mm at its thickest point, the needle-thin UX Series nonetheless packs impressive specifications.

S-Frame Digital Photo Frames

Sony's S-Frames offer convenient features such as slide show variations, an auto orientation sensor to detect if they have been placed horizontally or vertically, clock and calendar views, and index modes so you can preview several photos at once. You can also conserve energy by using the auto power on/off setting to program when you want the frame to turn on in the morning and off at night. Functions of the digital photo frame can be managed using the included remote controller.

Digital images can be loaded onto the internal memory of the digital photo frames from several types of media cards, including Memory Stick PRO, Memory Stick PRO Duo, SD/SDHC and MMC memory cards. Photos can also be transferred to the frames from a computer via a USB cable (optional). All models support JPEG and RAW (thumbnail preview) image file formats.

- Whether you choose to display your frame vertically or horizontally, the Auto Orientation sensor will rotate your photos into portrait or landscape format — automatically.
- The frames makes a beautiful — and practical — addition to your living room, office or kitchen. Clock and calendar functions show the current date or time right along with your pictures.
- Display your photos as single images, or as engaging slideshows with your choice of creative transition effects. The thumbnail index view lets you quickly scroll through all your shots to find just the ones you're looking for.

Mirrorless DSLRs

What's the difference between Mirrorless and 'normal' or true DSLR? Basically, mirrorless digital SLRs are smaller and lighter than their true DSLR counterparts. By eliminating the mirror, and sometimes the entire viewfinder too, mirrorless DSLRs are closer in size and weight to compact cameras (without the lens). This makes mirrorless DSLRs more portable than regular DSLRs and draw less attention to you when shooting. True DSLRs include an optical viewfinder that uses mirrors to reflect light from the lens to the viewfinder (this reflective system is called a pentaprism). The benefit of an optical viewfinder is that you see exactly what the lens sees. If the image is out of focus, you'll see it in the viewfinder. The optical viewfinder also lets you track moving subjects, snapping pictures as you go. This is why normal DSLRs are the only choice for action and sports photographers. By contrast, mirrorless DSLRs have electronic viewfinders and some have no viewfinder at all: the only way to compose pictures is by using the LCD screen on the back of the camera.

Have you ever missed a great shot with a compact camera because it wouldn't focus in time? With true DSLRs, there is no such issue: autofocus response time is near instantaneous. However, mirrorless DSLRs use the type of autofocus found in compact cameras. So obviously focusing is slower. However, if you are shooting landscapes, there's no problem, the scene is going to stay put. Nontheless, mirrorless and true DSLRs both use interchangeable lenses. Some lenses called "pancake" lenses add very little to the dimensions of the mirrorless DSLR - since they don't stick out from the camera body. With a pancake lens, the camera will fit into a spacious pocket. However, iif you add a zoom lens, it probably won't fit in your pocket. Last, for videographers all mirrorless DSLR cameras offer HD video modes and include an HDMI port, which allows the camera to be connected directly to an HDTV. So bottom line, if you want a camera that's sophisticated yet portable, then a mirrorless DSLR is the way to go.

OLYMPUS®

E-PM1 PEN Mini

Lighter than a full-sized DSLR, the mirrorless E-PM1 provides a flexibility and creativity, far beyond that of a point-and-shot. It features 12.3MP image sensor, TruePic VI image processor, in-body image stabilization and 3" LCD with 460K pixels. It offers a range of interchangeable lenses and accessories to suit your particular shooting style. Attach the included FL-LM1 flash via the accessory port, or leave it at home for maximum portability. The E-PM1offers stunning low light performance with the Olympus AF Illuminator, the ability to add an external flash, ISO up to 12,800, six in-camera Art Filters, and up to 5 fps shooting. Easily capture beautiful portraits with the ePortrait Mode. In addition to shooting JPEG and RAW stills, along with 3D stills, the E-PM1 also shoots 1080/60i HD video (AVCHD or AVI formats) with stereo sound and HDMI output.

E-PL3 PEN Lite

The E-PL3 steps up with distinct styling, an articulated LCD screen and exposure mode dial. The bright, 460k dot high-resolution screen tilts up and down (from 80° up to 45°) to capture moments from a variety of angles. And like the E-PM1, the E-PL3 incorporates six Art Filters—but it adds effects and variations for each. All other features are the same as the E-PM1 including stunning low light performance with the Olympus AF Illuminator, the ability to add an external flash, ISO up to 12,800, and up to 5 fps shooting. Easily capture beautiful portrait with the ePortrait Mode. In addition to shooting JPEG and RAW stills, along with 3D stills, the E-PM1 also shoots 1080/60i HD video (AVCHD or AVI formats) with stereo sound and HDMI output. Switch from still to movie mode with a touch of the Direct HD Movie Button.

E-P3

The flagship Olympus PEN camera, the compact E-P3 offers a classic, all-metal design and the world's fastest autofocus. It features a bright, 614,000 pixel, high-resolution, OLED touchscreen to easily navigate and control the camera at the touch of a finger. Choose AF points, release the shutter, and navigate the EP-3s menus with just the touch of your finger. With the AF (Anti-Fingerprint) coating, you don't have to worry about fingerprint smudges. The icons and graphic *menu are optimized* for the ultra-high definition OLED monitor to not only increase visibility, but also allow for intuitive operability. The design uses colors that are easily distinguishable regardless of individual differences in color perception while at the same time reduces fatigue on the human eye. The E-P3 also has a built-in pop-up flash, includes a removable grip (can be replaced with the optional MCG-2 providing a thicker, more aggressively hooked grip) and incorporates 10 Art Filters with effects and variations for each.

Canon

EF-S 17-55mm f/2.8 IS USM

The large circular aperture produces a shallow depth-of-field, creating background blur that draws attention to the photographic subject. The lens construction includes UD and aspherical elements, plus Image Stabilizer lens groups that shift to compensate for camera movement, ensuring clear, crisp images, even in dim light. With a ring-type USM, inner focusing & AF algorithms, this lens achieves autofocus quickly and quietly.

CA175528IS **1179.99**

EF 50mm f/1.2L USM

Ideal for low-light photography, the high-performance EF 50mm f/1.2L USM is a standard focal length optic featuring an ultra-large aperture for a narrow depth of field that produces a soft background blur. Its weather-resistant with lens coating and construction that are designed to minimize the ghosting and flare that frequently occur with DSLRs, to deliver superb image resolution and contrast.

100mm f/2.8 EF USM Macro Lens

The 100mm f/2.8 macro lens will focus over the full range from infinity down to life size (1:1 reproduction ratio). A high-performance ring-type ultrasonic motor provides fast and silent operation throughout its focus range. It also allows full-time manual focusing. An advanced optical formula with a three-group floating element system provides exceptional close-up performance, and a wide manual focusing ring offers smooth action and full-time manual focus override, even in the AF mode.

CA10028MEFQ **599.99**

EF 24-70mm f/2.8L USM

This lens improves on the previous L-series 28-70 f/2.8 lens with something even better. The range has been extended to cover an ultra-wide-angle 24mm, which makes it ideal for digital as well as film shooters, and the optics are even better than before with two aspherical elements and a totally new UD glass element. It's now sealed and gasketed against dust and moisture, and an improved processing unit makes the AF faster than ever.

CA247028LEF **1399.00**

70-200mm f/2.8L ISII USM

Incorporating Canon's second generation two-stage Image Stabilization technology, this telephoto zoom responds in as little as 0.5 seconds, while providing up to three stops of correction for camera shake. Its AF system has been refined for better response time and tracking speed. And even the new 8-blade circular aperture offers a more pleasing out-of-focus image. Constructed to pro standards, this fast zoom is also highly resistant to dust and moisture.

FM10

Lightweight, affordable, fully-manual film SLR that introduces the studet or beginner photographer to the fundamentals of exposure, aperture, and shutter speed controls. Exposure settings, film advance and rewind are all done manually. Focusing manually while viewing through the lens is an exciting way for a budding photographer to develop a sense of composition. Built-in hot shoe accepts just about any Nikon Speedlight in manual or non-TTL auto modes, plus the FM10's built-in center-weighted light meter couples with a vast array of Nikon manual focus and autofocus ("D" type) lenses.

The F6 features 11-area Multi-CAM2000 AF system and iTTL flash control. But in these days of digital imaging, why shoot film at all? Many photographers prefer the results slide film yields, or they require an archival imaging system. The F6 provides a pure, gratifying photographic experience that is comparable to no other. 50,000 Cycle KEVLAR/aluminum-alloy shutter, dust and moisture resistant body, color matrix metering, 41 custom functions, 100% viewfinder coverage and interchangeable focusing screens

Carl Zeiss
Manual Focus ZF Lenses for Nikon

Film makers and photographers know and appreciate the quality and performance of Carl Zeiss lenses. Real, emotional, and without compromise, Zeiss lenses give the photographer control over every aspect of the composition. They offer excellent possibilities for personalized manual composition. BIONZ image processor with color-noise reduction achieves low noise up to ISO 12800, without sacrificing fine detail. Multi-frame NR boosts effective sensitivity up to ISO 25600.

- Quick AF Live View maintains the same focusing speed as an optical viewfinder. Focus Check enables critical framing and magnification for recise focus in macro and tripod shooting.
- 3-inch high resolution (921,600 pixels) Xtra Fine LCD screen tilts 90° degrees up or down.
- Full HD (1920 x 1080i) video in AVCHD format, plus built-in stereo mic and HDMI output.

DSLR-A900

Features a massive 24.6-megapixel 35mm full-frame CMOS image sensor for a larger capture area, improved wide-angle performance and tighter depth of field control—as well as amazing image quality. Body-integrated, full-size SteadyShot INSIDE image stabilizer compensates for up to four shutter speed steps, giving you more freedom in low light. It can shoot up to 5 fps, has a large, ultra-bright viewfinder with 100% coverage, 3-inch Xtra Fine (921,000 pixels) LCD and HDMI output. Has mirror lockup mode, built-in eyepiece shutter, user-replaceable focusing screens, ±2EV exposure bracketing (3 exposures), and remote camera control from your PC.

SLT-A35 • SLT-A55

Incorporating Translucent Mirror Technology, the 16.2 megapixel SLT-A35 and SLT-A55 achieve the highest-level of auto focus speed for both still image and movie shooting. It also allows them to shoot continuously at up to 7 fps (SLT-A35) or 10 fps (SLT-A55). The absence of the moving mirror mechanism also makes them much more compact than traditional DSLR cameras. Otherwise the same, the SLT-A55 adds a built-in GPS.

- They record Full HD 1080/60i Full HD AVCHD format and have an HDMI output.
- Ultra-high ISO sensitivity (ISO 100 - 12,800) plus Auto HDR and Multi frame NR
- Full-time Live View using viewfinder or articulated 3" Xtra Fine (921,600 pixel) LCD
- The Tru-Finder eye-level viewfinder (1.15 million dots) provides 100% coverage and 1.1x magnification for easy and natural framing.

Built-in flash allows for spur of the moment or snapshot capture, while the integrated hot shoe lets you add on flashes or other flash accessories. Dual media slots help you to shoot longer and provide you with the option of storing two different cards at once. Fill one with Memory Stick media perhaps and the other with SD/SDHC/SDXC cards if you feel like it.

For Digital Flash

Umbrellas soften, broaden, and diminish the light output of any tungsten or flash light source. A white umbrella without a black backing may also be used as a makeshift softbox, although the use of the light will not be as efficient as with a light box.

Kit Includes:
- 2 32" Umbrellas-White with Removable Black Cover
- 2 Umbrella Bracket with Swivel Mount & Flash Shoe
- 2 8' Black air-cushioned Light Stands

Bounce Diffusers

This bounce diffuser is a half-dome shaped flash diffuser that slips securely over the front of the flash, with use of the included model-specific flash adapter. The half dome design allows for a larger diffusion surface and spreads the light evenly and over a larger area, producing the effect of a much larger diffuser and light source.

Ultimate Light Box
Flash Diffuser Kit

The Ultimate Light Box Kit is a flash diffuser system for handle or shoe mount flash units. Designed as a modular system with the features of a larger studio soft box, it allows for multiple layers of diffusion to control the softness of the light.

Ultimate Light Box
Diffuser ProPack

The ProPack has all of the features of the Ultimate Light Box diffuser kit and the small Half Dome diffuser, plus the added features of the unique Black Box, and six colored Gel Filters and accessories.

PEARSTONE Bounce Dome
Flash Diffuser

- Diffuse the light output of the flash, producing softer shadows and a softer, more natural glow
- Provides even coverage across the entire frame

MODEL TYPES

DG Models

Optimized for Digital SLR's

These are large aperture, wide angle lenses with short minimum focusing distances and an abundance of peripheral illumination. While they are ideal lenses for digital SLR cameras, they are also suitable for traditional 35mm SLR's.

DC Models

For Digital SLR's Only

These lenses feature an image circle matched to the small sensor found in digital SLR cameras. This method results in a lens ideally suited to digital reproduction with the added bonus of reduced weight.

MODEL FEATURES

HSM - HyperSonic Motor. Enables virtually silent, highly-responsive auto and manual focusing, as well as manual-focus-only override.

ASP - Aspherical Lens. The aspherical lens complex allows freedom of design, improved performance, a reduced number of component lenses and a compact size.

EX - EX Lens. The exterior of this lens is EX-finished to denote the superior build and optical quality, and to enhance its appearance.

OS Function - Optical Stabilizer. This function utilizes a built-in mechanism that compensates for camera shake. It dramatically expands photographic possibilities by alleviating camera movement when shooting by hand-held camera.

APO - APO Lens. In order to attain the highest quality images, the APO lens has

been made using special low-dispersion (SLD) glass and is designed to minimize color aberration.

IF - Inner Focusing. To ensure stability in focusing, this lens moves the inner lens group or groups without changing the lens' physical length.

RF - Rear Focusing. This lens is equipped with a system that moves the rear lens group for high-speed, silent focusing.

RFS - Rear Filter Slot. This lens has a rear slip-in gelatin filter slot.

Lens Covers

LensCoat

Manufactured from 100% closed-cell neoprene, offering protection from bumps, jars, and nicks, with a camouflage-pattern fabric cover. Lens Covers also provide a thermal barrier, protecting your hands from cold lenses in lower temperatures. They are easy to install and remove, leaving no residue on the lens. Moving a big white (or black) lens near skittish wildlife is like waving your arms – a sure way to flush your subject and ruin what could be a once-in-a-lifetime photo opportunity. LensCoat™ Lens Covers mask your large lens, giving you a better chance at getting the shot.

B+W

The industry-standard for demanding professionals and amateur photographers for creative imaging with optimal quality. Choose from correction and effect filters for color and B&W photography; Käsemann polarizing filters; close-up lenses; special-effect- and trick lenses; filters with SLIM mounts for vignette-free exposures with wide-angle zoom- and fixed focal length lenses.

B+W uses the very best glass and filter mounts, and machines them with CNC-controlled fabrication machines to make sure that the filters perform their functions optimally without jeopardizing image quality.

Most other filter manufacturers start with ordinary window glass that has been poured in thin sheets and cooled quickly, introducing internal flaws. B+W starts with a cylinder of Schott German optical glass from which the filters are diamond cut, precision ground, and then polished to ensure flatness on both surfaces and uniform thickness throughout. Every B+W filter is interferometrically tested for plane parallelism. This process is used routinely by the world's leading lens makers, but only rarely by filter manufacturers.

HOYA

Wouldn't you rather spend your time attaching the right filter than retouching every photo? Attaching the right filter can replace the need to retouch each digital photo you take.Using filters allows you to spend more time taking photos and less time in front of the computer!

Digital camera CCD or CMOS sensors are highly susceptible to reflections - this stray light can ruin your photographs! Don't risk your valuable photos by using bare-glass filters. Now try a HOYA Digital Multi-Coated filter and see how the benefit of substantially reduced reflections can improve your image. Reduced internal reflections mean a clearer image with greater contrast

SQUARE OR RECTANGULAR FILTERS require the use of a special filter holder, or matte box. They offer the additional benefit of sliding adjustability, for effects that must be precisely aligned within the range of graded filters. In all cases, it is advisable to use a mounting system that offers sturdy support and easy manipulation. The use of a lens shade will minimize the effect of stray off-axis reflections.

VORTEX Escape

Collapsing to under 2' and extending to 6', the 2.4 lb. Escape is ideal for sport optics use. The head has adjustable tension control, so that you can follow subjects with the head unlocked and not have to worry about the head 'dumping' to gravity if you should take your hands away for a moment.

The Escape's quick release system is an open-channel type, meaning that the relationship of the plate to the clamp is horizontally variable. This makes it possible to adjust the fore/aft position of your optics so that the weight is perfectly positioned over the legset, allowing you to carry a little less weight. Load capacity is 14 lbs,.

Pro9000 MKII (8-Color)

The Pro9000 MKII's dye-based inks produce bright, highly saturated colors on a wide range of media, from matte to high gloss. Eight separate ink channels offer a level of color fidelity rivaling that of positive photo film. The red and green inks increase saturation by 60% and 30% respectively compared to 6-ink printers. Subtle details – particularly in areas of low chromaticity – are reproduced with proof-standard accuracy. Unique ChromaLife100 system achieves beautiful prints with enhanced longevity– resisting fading for up to 100 years.

Three monochrome inks and seven color inks provide photographers with outstanding monochrome and color reproduction in a single unit. Hahnemühle
FINEART

Inkjet Paper

The Hahnemuhle paper mill has been producing quality mould made artists papers for over 400 years. Since its founding they have developed a tradition of excellence in art materials that have now been brought to the digital age. The result is the Hahnemuhle collection of Digital Fine Art papers. Designed for discerning users, these grades of Digital Fine Art paper can be used to create limited editions, giclees, original digital art, traditional output, photographic and historic photographs on a choice of paper textures, multiple colors and a huge variety of sheet sizes and weights. These are available in cut sheet sizes of A4, A3, A2 and are compatible with all inkjet printers up to a printed resolution of 1440 dpi, while printers that feed flat from the bottom and bending the paper up round only being recommended up to 210 gsm. The Hahnemuhle papers work equally well with both dye and pigmented based inks on a wide variety of printers providing a color intensity and crispness not possible with non-coated art papers. The Hahnemuhle collection is manufactured in the traditional mould-made and fourdrinier techniques that artists value for its unique rich look, feel and texture. No longer does the digital artist have to compromise on paper quality when producing or reproducing their work digitally. Surface coating in combination with the traditional paper base and the right inks will produce sharp, high resolution output with the warmth and quality of the hand generated artwork. In many cases it is difficult to identify the original with the copy.

INNOVA

Innova's highly acclaimed award winning FibaPrint range is designed as a digital solution to the traditional Fibre based baryta papers used in the conventional darkroom. A special Micro porous gloss coating was developed specifically for photographic reproduction and high quality fine art print applications. These coating range from a semi-matte to an ultra gloss finish, with the texture and feel of the art paper base giving it a quality as close to any traditional Fibre photo paper out there. The acid inhibiting crystal layer technology makes it the perfect digital FibaPrint alternative. They have an extremely large colour gamut and D-max rating of up to 2.7.

Technical (Manual) & Powertech (Electrical) Cutters

The Technical/Powertech range use a unique, self adjusting triple roller cutting head to effortlessly slice through almost any flexible sheet, including thin films and foils, up to 4mm thick. They are ideal for display/exhibition applications. The Powertech models have the cutting head electrically driven by a steel reinforced belt, via a foot operated pneumatic switch, thus leaving both hands free for speedy repositioning and faster throughput.

Collapsible Reflectors

One visual issue created by single-light sources is contrast. Reflectors, always a favorite contrast solution for fashion photographers, fill in shadows thrown by brilliant light sources such as the sun or a single strobe without creating the need to add a second fixture. The reflector takes the place of a second light.

GC-PX10 HD Memory Camera

The GC-PX10 is not a video camera that also records stills, nor is it a digital still camera that also records videos. It is a true hybrid that has been redesigned to provide satisfaction no matter what you choose to record, and offers unique advantages of being an all-in-one camera.

- Videos are recorded at Full HD 1920 x 1080 in Progressive mode. Each individual frame is a complete, high-resolution picture unlike interlace. And the 36Mbps high sampling rate means each frame image is filled with more image detail.
- Konica Minolta HD lens with 10x optical/19x Dynamic Zoom
- Easy to use, tiltable 3.0" Touch Panel LCD
- Capture scenes and discover what's really there — through high-resolution digital stills at 60 frames per second, or progressive Full HD videos from which you can grab the best frame as a digital still, or with 300 fps high-speed recording to slow the action down and see what you've been missing.
- High-speed recording enables super slow motion playback, so you can analyze movements that may not be visible to the naked eye in real time. Use it as an effective tool for sports technique analysis and nature studies. Can be used up to 2 hours straight, so you can record an entire match or game.

- Record 8.3MP stills at 60fps, for up to 130 shots (2.1 sec.). Get sharp, crisp images for every split-second of movement. Capture even fast-paced action as high quality digital stills.
- The 12MP CMOS sensor allows you to record real non-interpolated 12-megapixel stills. And high-sensitivity ISO 6400 enables shake-free crisp images even for low-lit situations.
- Just press the Shutter button in Video mode. You can take an 8.3M (3840 x 2160) still while recording 1920 x 1080 Full HD video. This way, you won't have to exit the Video mode each time you want to take still images.
- Advanced Optical Image Stabilizer (O.I.S.) uses prism technology to deliver effective results over the entire zoom range. Plus, the system capitalizes on the large area of the CMOS to boost image stability in the wide-angle range, such as when you're moving with the subject.
- 32GB internal flash memory plus SD/SDHC/SDXC card slot.

PAL Camcorders

In the U.S., the TV color system is known as NTSC, which uses 525 scan lines at 30 fps (frames per second). But there are two other television standards, called PAL and SECAM, used in the rest of the world. Unlike NTSC, PAL uses 625 scan lines at 25 fps. So, while camcorders can record video anywhere in the world, its where that video is played back that makes a difference. PAL camcorders are designed to play back in countries that support the PAL color system—such as Europe, China, the Middle East, and South Africa. This means that these camcorders—with their different signals and frame rates—don't play back on American televisions. There are no multi-standard camcorders; they are either NTSC or PAL. Variations to these standards also exist, such as PAL-B, PAL-I (UK), SECAM-D (China), and SECAM-L (France).

GY-HMZ1U ProHD 3D Camcorder

Affordable professional stereoscopic 3D image capture is here. The dual-lens, dual-imager GY-HMZ1U offers 3D video, 3D still image, and 3D time-lapse recording, and can playback 3D video on its 3.5" LCD screen without any special glasses. The camera also records high-definition 2D video as AVCHD, so you can incorporate with any of your traditional HD-capable video equipment and workflows.

Twin bright HD lenses (f/1.2 at the wide end) zoom up to 5x in 3D mode and 10x in 2D mode. The imagers are likewise twinned; at 3.3 M/p each, the 1/4.1-type CMOS chips capture dual video signals at Full HD 1920 x 1080 that can be recorded as a single file that's encoded as MVC. This is a variant of AVCHD's MPEG-4 compression that, with its left-eye and right-eye information, contains double the usual information of a comparable two-dimensional HD file.

Along with traditional 2D capture of AVCHD at several selectable bit rates, there are also modes for recording 3D as two half-sized images side-by-side, producing bit-efficient AVCHD files. Falconbird LSI processing enables the recording of 3D video as both 60i, for smooth motion in fast-action shots, and as 24p, for a film-like effect.

Built-in "3D" stereo microphones and dual XLRs for high-quality stereo audio capture from a shotgun mic or wireless audio receiver. (Includes a shotgun mic holder, but microphone is optional.) Audio is recorded in 3D modes as dual-channel AAC for biphonic 3D sound, and in 2D modes its recorded as two-channel Dolby Digital.

These drives are conduit between P2 cards and a computer. When connected to your computer, the P2 cards appear as one drive, making it extremely easy to browse through video footage. The AJ-PCD20 can ingest up to five P2 cards at one time over FireWire or USB 2.0. For even faster data transfer, the AJ-PCD35 drive can also ingest up to five P2 cards at once. However, it connects via a "PCI-e" card slot of a tower computer to support a peak transfer speed of up to 1.2 Gbits/sec. This is 3x faster than USB 2.0 and 1.5x faster than Firewire/1394b.

3-CMOS Handheld and Shoulder-Mount Interchangeable Lens HDV Camcorders

The handheld HVR-Z7U and shoulder-mounted HVR-S270U step up from the HVR-Z5U with a 1/3" bayonet interchangeable lens system. This allows the use of a wide range of lenses from Canon and Fujinon. Both come standard with a 12x Zeiss lens for HD video. These lenses give them the same functionality as Sony's professional fixed-lens camcorders with built-in features such as optical stabilizer, and automatic back-focus adjustment. Using an adapter, users can also attach Sony's Alpha (digital still camera) lenses. The HVR-Z7U uses InfoLithium batteries and has an HDMI ouput. The HVR-S270U uses BP-GL65 or BP-GL95 batteries, has four-channel audio input, HD/SD-SDI output, and also supports standard-size cassettes for extended recording times (up to 4.5 hours).

Boompoles are an essential tool in any sound person's kit. With the chart below you can easily compare important features such as length, weight, and build material. Aluminum poles are lightweight, strong, and offer a great value for their price. Poles made of carbon fiber offer a high strength to weight ratio, and therefore represent the ultimate in smooth superlight handling performance. Poles with an internal cable will both streamline your rig and simplify your setup and breakdown. Choose from bottom or side exit cable connections to best suit your needs.

Simultalk 24G

Full-Duplex Wireless Intercom with Slimline Headsets

Ideal for production work or houses of worship, the Simultalk 24G is a wireless intercom system that enables two people to communicate freely in real-time, without having to push a button to talk, and without having to wait for the other person to stop talking before they respond. Supplied single-sided Slimline headsets are preferred by video camera operators (dual-sided headsets tend to get in the way when the video camera is mounted on the operator's shoulder). More people can be added to the Simultalk 24G system with the purchase of additional belt-packs and Eartec headsets.
